BRIEF INDUSTRIAL POTENTIALITY SURVEY REPORT OF RAYAGADA DISTRICT

1. General Characteristics of the District:

The district of Rayagada is known as the most famous region of the state because of its longest human history. Although the district came into existence on the 2nd October in the year 1992, it has long and glorious historical records evident by copper plates, rock inscriptions as well as different coins, which clearly indicate that the region was the centre of attraction in all ages. In the third century B.C, during the reign of Ashoka the Great, it was covered under Kalinga Empire. The hilly track between river Languli and Prachi language as Bansadhara and Nagabali, as evident by Andhra Historical Journal XXVII edition at page 46, was famous for spices. Another Bhojpur Rock inscription in Brahmi of Rastrik King Mandhata adds some facts about this region. Later, Rastriks were defeated by Kharvela, the only Aryan Emperor of Orissa, at the time of Samudra Gupta himself during the Chawpagada battle. The rock inscription of Allahbad inscribed by Mahamantri Harisena provides evidence to this effect. Later, the ruins of mud fort and historical idol of Mahakal Bhairab found at Champikota very near to Rayagada makes it clear that this is the ancient Champagada Fort. During Ganga Vansi and Surya Vansi Kings, it was under Dadarnab Dev of Gudari Kataka. A rock inscription found at Pataleswar temple in Brahmi script provides evidence to this effect. A subsequent literature found at Pataleswar temple speaks about the River Langully, giving supporting evidence to the various facts. This region went to Bahamanis when Mukund Dev was defeated at Gohera Tikiri in 1519. Then, it was under Nandapur Kingdom for brief period of 47 years. Biswambar Dev who was defeated and killed by Hasin Khan was perhaps the third king installed at Rayagada. Still, the Sati Kunda Goddess Majhi Ghairani and the mudfort around it speaks much about its evidence. In subsequent years it was under Bobilli, a Tahasil of Vijayanagaram. Later, during the English regime, Rayagada was covered under the Jeypore Zamindari, which continued till Independence.

1.1 Location & Geographical Area:

The district lies between 82°54' to 84°02' longitude East and from 19°00' to 19°58' North Latitude. It extends in the east upto Gajapati district and in the west upto Koraput district and part of Kalahandi district, in the south upto Parvathipuram sub-division of Andhrapradesh and in the north upto Kalahandi and Phulbani district of Odisha. The total Geographical area of the district is 7073.00Sq. Kms.

1.2 Topography:

Rayagada district is situated in the Eastern Ghat's Agro Climatic region. Soil type of the district is mostly acidic and red laterite in nature. However sandy loam and black soil are also found in some parts of the district. The main river flows in the district are Bansadhara and Nagabali.

1.3 Availability of Minerals:

Rayagada district has a potential reserve of graphite, manganese, bauxite, china clay, limestone, quartz, gemstones etc. The following paragraphs are a brief account of the minerals of the district.

Bauxite

The district has many high level bauxite occurrences. Important bauxite deposits of the district are Sijimali, Kutrumali, Baphilimali, Sashubohumali, Lakharasi. Kutrumali and Sijimali deposits extend into both Rayagada and Kalahandi districts. Gibbsite is the main aluminous mineral. Al₂O₃ content ranges from 44 to 57.80%, SiO₂ content is between 0.40 to 8.74%, Fe₂O₃ content ranges between 16.2 to 27%. The resource of bauxite in the district is more than 600 Mt. However, this figure is likely to be much higher in view of numerous occurrences of smaller plateaux whose potentiality has not been quantified through detailed exploration. Almost all the plateaux rising more than 900 m above MSL contain bauxite which have been explored by Directorate of Geology and GSI.

Manganese

Manganese Ore deposits in the district are associated with khondalite suite of rocks belonging to Eastern Ghat Supergroup. Nishikhal manganese deposit is the most important, single largest deposit in the area with a reserve of nearly 10.2mt (Mn-28-38%). It is currently being mined by OMC and fed to Vishakapatnam Steel Plant. The other deposits in the area are Podakona-Taldhodshi(7mt), Kuttinga-Debjholla(1mt) etc. Manganese occurrences have been reported around Devajhola, Kutingpadar, Nisikhal, Rukunibadi, Paikaranipinda, Kandharanipinda, Taladoshi, Upardoshi, Podakona, Kinchikhal, Koka, Liliguma, Sirlijodi, Balkapai, Bhitardulki, Sikapai, Pariguda, Katubadi, Sunakhunti, Anjorhi, Bada Siringul, Purunapani, Mandhara etc. Manganese content varies from 7% to 38%.

Graphite

Graphite occupies a very prominent position in the district with regard to its extension, reserve and number of deposits. There are quite a number of graphite deposits in the district occurring at the contact of the khondalite and the granite gneiss. The important occurrences which are under active mining are in the famous Tumudibandh belt. Nearly 150 occurrences of graphite have been identified. The most important occurrences of the district are Bandhamandi, Solagudi, Birida, Naringponga, Jagdalpur, Dukkum, Pangadi, Hajaridangu, Sada, Minahala, Pichaliguda, Rauli, Bhitardulki, Jholaguda, Sikabarhi, Kaliapalli, Patrani, Gandrugam, Dallurgam, Malimunda, Disidaku, Deulbadi, Alanda, Budaguda, Murkakona, Ajaygarh, Pipliguda, Bhitarsaja, Kumbhikota, Boragaon, Dongipadar, Tutter etc. Graphite is mostly of crystalline & flaky variety. It occurs in form of disseminations, veins, pockets, lenses and also as bedded deposits. Mineralisation is controlled by lithology, stratigraphy and structure. Graphite is associated with khondalite, calc-granulite, and granite gneiss and also with pegmatites and quartz veins. The fixed carbon value in low grade and high grade graphite occurrences varies between 5 to 25 % and 30 to 80 % respectively.

Limestone

Limestone occurrences in the district has been reported from Talasaja, Salimi, Gummigurha, Sikarpai, Ranjabadi, Bhitarijhol, Bheja, Santinagar, Nilabadi, Karlakona etc. Limestone occurs as lenticular bands associated with calc-granulite. The average CaO content varies from 28 % to 52 %.

Chinaclay / Kaolin

Chinaclay / kaolin occurrences have been reported in the district from Ambadola, Bandhamandi, Pipliguda, Kanipai, Bondichuan, Ladiponga, Loharahira, Bantichura etc. These occurrences are associated with khondalite, granite gneiss as pockets & lenses. The occurrences are highly gritty.

Quartz-Quartz veins of different dimensions are reported in the district. Among them, the notable occurrences are found around Bainibasa, Jamraguda, Bhaliapadar, Dangipada, Torumohra, Gudikhal, Sikampadar, Machhkhunti, Srirampur, Purlikona, Chitikapangu, Kusumpadar, Kasli etc.

1.4 Forest:
