Brief Industrial Profile of Keonjhar District

1. General Characteristics of the District:

Kendujhar is an interesting district from geographical, natural and anthropological points of view. Geographically, the district is endowed with vast and rich mineral deposits of Iron ores, Manganese and some amount of Chromites. It has another remarkable distinction of having one of the oldest rocks of the world at Asanpat which is assumed a break way part of Antartica and near about 38,000 million years old. About one third of the total geographical area of the district is covered by green forests and about 52% of the cultivated area is uplands. Anthropologically, it is noted for its very rich and varied tribal cultures. It's two most primitive and principal tribes are the Juangas and Bhuyans and they are still seen to stick to their tradition of showing warm hospitality to their guests by washing their feet. More traditionally, they also insist upon the wrong method of shifting cultivation which is the most un-scientific and harmful to their very existence. There runs an interesting and historically popular legend justifying the then name of this district as Kendujhar. Etymologically, the terms Keonjhar refers to the new capital town "**KENDHUJHAR**" of the King of Jyoti Bhanja, who built his fort near a perennial spring (Jhar) after his accidental physical feature and it is believed that thereafter the whole princely state must have been named and popularised as Kendujhar in honour of the name of the new capital town. This is one of the various speculative attempts of noted historical scholars at the exposition of the origin of the name Kendhujhar. Sequence to the integration of feudatory state with Orissa on 1st January, 1948, the erstwhile princely state of Keonjhar emerged as one of its thirteen districts with headquarters at Keonjhargarh.

1.1 Location & Geographical Area. Geographically, Kendujhar district is located in the northern region of Orissa. It is a small and land locked district with an area of 8303 sq. kilometers. The district is surrounded by Singhbhum district of Jharkhand in the north, Jajpur in the South, Dhenkanal and Sundargarh in west, Mayurbhanj and Bhadrak in the East. It lies between 21°11' N and 20°10' N Latitudes and between 85°11' E and 86°22' Longitudes.

1.2 Topography: The district consists of a compact area and its extreme length from north to south is nearly 145 km. The average breadth from East to West is about 65 km. It is divided into two widely dissimilar tracts-the lower Kendujhar and the upper Kendujhar. The former is a region of valleys and low lands, while the latter includes mountainous highlands with a general slope from North to South. The highlands consisting of clusters of rugged crags afford a safe retreat to its inhabitants in troubled times. The mountaintops appear from the low lands to be sharply ridged or peaked, but in reality they have extensive tablelands on their summits, fit both for pasture and for tillage. The average elevation in its central part is about 500m. At places, isolated hills rise abruptly from the plains. But most of the areas have a general elevation of over 600m. which forms the watershed of some rivers. The Baitarani River takes its rise in the hilly North Western division. In between these two natural divisions passes the State Highway from Chainbasa to Jajpur Road through the headquarters, Kendujhargarh.

1.3 Availability of Minerals: The district is favoured with vast deposit of mineral wealth such as Iron Ore, Manganese and Chromite. The Singhbhum- Keonjhar – Bonei belt passes through the district and continue 48 kms. Altogether out of which 14.5 kms. of this belt falls in the district. The resources of Iron Ores are more than 2500 million tonnes. The main places of Iron Ore deposits are Thakurani, Joda, Banspani, Sasangada and Gandhamardan Hills. Manganese Ores are found more than 20 million tonnes at Koida, Barbil, Bhadrasahi, Joda, Kalimati etc. The grade of Ores varies from 32% to 80% chromite is also available at Nuasahi and Boula in the district having a quantity of more than 6 million tonnes. Besides, the above minerals, pyrophilite and Dolomites are also available in this district. Pyrophilite deposits are found in Keonjhar sadar, Harichandanpur and Banspal Blocks having quantity more than 8 million tonnes. Dolomite deposits are found in Joda Block.
