Brief Industrial Profile of Koraput District

1. General Characteristics of the District

The erstwhile Koraput district came into existence on 1st April, 1936 after being carved out of Vizianagaram district which was under Madras Presidency and it was further divided into four districts namely Koraput, Rayagada, Malkangiri and Nawarangpur w.e.f. 02.01.1992. It extends to the West up to Bastar (Bananchal) and Malkangiri district, in the East up to Rayagada and Srikakulam (Andhra Pradesh) district, in the South up to Vizianagaram and Vishakhapatnam of Andhra Pradesh and in the North up to Nawarangpur and Rayagada.

1.1 Location & Geographical Area

The district is located on a section of Eastern Ghat in two agro-climatic zones namely Eastern Ghat High Land (entire Koraput Sub-Division and Kotpad Block) and South-Eastern Ghat Zone (Jeypore, Barium, Kundura and Boipariguda blocks). The district has altitude ranging between 300 metres to 1000 metres above mean sea level. The geographical area of the district is 8807 Sq. Kms. Geographically, the district of Koraput is located between 17.4 degree and 20.7 degree North Latitude and 81.24 degree and 84.2 degree East Longitude in extreme southern part of Odisha. It extends to the west up to Bastar (Banachal) and Malkangiri district in the East up to Rayagada and Srikakulam (A.P) district, in the south up to Vizianagaram and Vishakhapatnam of Andhra Pradesh and in the north up to Nawarangpur and Rayagada.

1.2 Topography

The district of Koraput is located on a section of Eastern Ghat in two agro-Climatic Zones namely Eastern Ghat High Land (entire Koraput Sub-Division and Kotpad Block) and South-Eastern Ghat Zone (Jeypore, Borigumma, Kundura and Boipariguda blocks). The district has attitude ranging between 300 metres to 1000 metres above mean sea level. The district of Koraput is having undulating topography with a number of all streams.

1.3 Availability of Minerals

The district is adequately endowed with significant mineral deposits like Bauxite, Black granite, Red orcher, Granite, Quartz, limestone, Dolomite, Clay and Mica etc.

1.4 FOREST

Forest occupies 21.79 percent of the total geographical area of the district. Total forest coverage is 1919 Sq. Km. Out of total forest area, 100 sq.km. is dense forest, 720 sq.km. is moderate dense forest and 1099 Sq. Km. is open forest. The principal species commonly found in the forest are Timber, Fire wood and Minor forest produces like Tamarind, Hill Brooms and different types of fibres, Oil Seeds, Medicinal Plants and Kendu Leaves etc. Koraput district is mostly having the forest growth with Climax species 'Sal'. The Sal growth is comparatively good around

Jeypore area. From Jeypore towards Jabalpur, there is also an area with marked growth of teak which is demarcated as 'Sal Teak Tension Zone'. There is also intermixture of bamboo forest mainly because of the biotic interference. The Podu (Shifting Cultivation) is rampant making a good area denuded. Large-Scale forest clearings by tribals are seen due to increase in demand for timber & fire-wood.

1.5 Administrative set up

The district of Koraput comprises of two Sub-Division with 14 Tahasils, 14 CD Blocks 24 Police Stations, 240 Gram Panchayats with 2042 villages. There are 5 towns in the district including 3 Municipality and 1 NACs. The detail picture of administrative set-up of the district is given below.
